PE

Property ERP

Uganda · URA ready · UGX-first

Run your portfolio like a command centre.

A modern property operating system for Kampala landlords and managers — rent, arrears, VAT/WHT, WhatsApp collections, and smart meter cut-off in one place.

Live product

https://property-erp-iota.vercel.app

Prepared for client presentation · 2026

Property ops are still scattered.

Most Kampala portfolios still run on spreadsheets, WhatsApp chats, and paper files.

Rent leakage

Late invoices, weak arrears chasing, and no clear UGX cash picture.

Tax friction

VAT and WHT prepared late — URA risk and month-close stress.

Blind assets

No live view of occupancy, NOI, or which buildings actually make money.

Slow collections

Reminders and viewing bookings live outside the system of record.

Utility control

Cutting power/water for arrears is manual, inconsistent, and hard to audit.

No single source

Owners get different numbers from managers, accountants, and caretakers.

Property ERP — one operating system.

Built for Uganda: UGX primary, USD secondary, URA-aware finance, WhatsApp-native ops.

Portfolio analytics

Photo-led assets with occupancy, collections, NOI, yield, and analyst notes per property.

Rent & arrears

Invoices, dual-currency ledgers, arrears aging, and one-tap WhatsApp rent reminders.

Tax & month close

VAT, WHT, bank recon, and closing checklists for directors and accountants.

WhatsApp assistant

Book viewings and draft collection messages without leaving the ERP.

IoT house control

Link UMEME & NWSC meters, track kWh/m³ usage, cut or restore supply with audit trail.

Roles & control

Owners, managers, and finance see the same numbers — with clear actions.

What your team gets on day one.

Dashboard
Portfolio KPIs, collection pulse, alerts

Properties
Image cards, scores, full asset analytics

Units & Tenants
Hierarchy, occupancy, lease status

Rent & Payments
Invoices, collections, dual currency

Arrears
Aging, reminder workflows

Expenses
Approvals, suppliers, cost history

Maintenance
Tickets, quotes, contractors

Accounting
GL, bank recon, VAT, WHT, close

Reports
Owner packs and operational views

IoT Controls
Power/water usage + remote cut-off

WhatsApp Bot
Bookings + rent reminder drafts

Settings
Org, tax, FX, meter connections

Built for how Uganda actually operates.

UGX-first money

Every screen leads with Uganda Shillings; USD stays secondary for contracts and reporting.

URA-aware finance

VAT and WHT sitting next to rent and expenses — ready for month close, not year-end panic.

Collections that close

WhatsApp reminders and booking flows meet tenants where they already are.

Asset intelligence

Photo portfolios, NOI, yield, occupancy trends, and analyst notes per building.

Utility leverage

Connect UMEME/NWSC meters, see usage, and disconnect with a signed audit trail.

Fast to adopt

Browser-based, mobile-ready, live today — no heavy install for managers on site.

Try it live: https://property-erp-iota.vercel.app

A simple path to go live.

01

Discovery

Portfolio size, roles, URA needs, meter readiness, WhatsApp number.

02

Configure

Properties, units, tenants, tariffs, tax rates, gateway IDs.

03

Pilot

One residential + one commercial asset — rent cycle + reminders.

04

Rollout

Full portfolio, IoT links, owner dashboards, month-close pack.

Ask from the client

- List of properties/units and current rent roll (UGX)
- Preferred WhatsApp business number for reminders & bookings
- UMEME / NWSC meter IDs where cut-off is required
- Owner vs manager roles and approval rules

Ready when you are.

Let’s walk the live product with your portfolio data, agree the pilot assets, and lock a go-live date.
